

Sec. 22a-50-4. Classification criteria

When reviewing a pesticide for its classification the Commissioner shall consider a number of factors, including but not limited to the following:

- (a) human fatalities
- (b) effects of toxicological significance including but not limited to, neurological or behavioral alterations and liver changes
- (c) mutagenesis
- (d) teratogenesis
- (e) carcinogenesis
- (f) severe skin or eye irritation
- (g) persistence of the pesticide or break-down product
- (h) bioaccumulation of the pesticide or break-down product
- (i) widespread or common practice which runs contrary to the intent of label instructions and prohibitions
- (j) risk of contaminating food chains and thereby causing chronic, delayed or secondary poisoning
- (k) the extent to which ingredients or break-down products leach from the soil and/or drift as vapors from the target area
- (l) synergistic effects

(Effective February 14, 1975)
