

Sec. 9-241-21. Hardware standards. Enclosure

The DRE device shall be provided with a curtain or some other means of enclosing the voter while the ballot is cast. Curtains or other privacy enclosures used to conceal the voter while in the voting booth shall be designed and constructed, either electronically or manually, to open and close with ease. Curtains or other privacy enclosures shall permit the disabled voter and those voters in wheelchairs to easily enter and exit the equipment without obstruction. Such an enclosure shall be constructed so that no one in the polling place will be able to see for which candidates or questions a voter, including a voter in a wheelchair, is casting his vote.

(Effective January 21, 1994)
